

javascript tasks and projects for frontend web development

Thought for a second >

Here are **JavaScript tasks and frontend projects** you can practice, from beginner to advanced.

Beginner JavaScript Tasks

1. Counter App

- Increase, decrease, reset count
- Add max/min limits

2. Color Changer

- Change page background on button click
- Generate random hex colors

3. To-Do List

- Add tasks
- Mark tasks complete
- Delete tasks
- Store tasks in `localStorage`

4. Digital Clock

- Show current time
- Add 12-hour / 24-hour toggle

5. Form Validation

- Validate name, email, password
- Show error messages
- Disable submit until valid

6. Tip Calculator

- Input bill amount
- Select tip percentage
- Calculate total and per-person split

7. Image Slider

- Previous / next buttons
- Auto-slide feature

- Dots navigation

8. Character Counter

- Count typed characters
- Show remaining character limit

Intermediate Frontend Projects

1. Weather App

Use a weather API.

Features:

- Search city
- Show temperature, humidity, wind speed
- Show weather icons
- Handle loading and errors

Skills practiced:

- `fetch`
- APIs
- `async/await`
- DOM updates

2. Quiz App

Features:

- Multiple-choice questions
- Score calculation
- Timer
- Show correct answers at the end

Skills practiced:

- Arrays and objects
- Event handling
- Conditional logic
- State management

3. Expense Tracker

Features:

- Add income and expenses
- Show balance
- Filter transactions
- Save data in `localStorage`

Skills practiced:

- Forms
- Array methods
- CRUD operations
- Local storage

4. Movie Search App

Use an API like OMDb or TMDb.

Features:

- Search movies
- Display posters, ratings, descriptions
- Show movie details page/modal
- Add favorites

Skills practiced:

- API integration
- Search functionality
- Dynamic UI rendering
- Modals

5. Notes App

Features:

- Create notes
- Edit notes
- Delete notes
- Search notes

- Save notes locally

Skills practiced:

- CRUD
- DOM manipulation
- `localStorage`
- UI organization

Advanced Frontend Projects

1. Kanban Board

Features:

- Columns: To Do, In Progress, Done
- Drag and drop cards
- Add/edit/delete tasks
- Save board state

Skills practiced:

- Drag-and-drop API
- Complex state
- UI interactions
- Local persistence

2. E-Commerce Product Page

Features:

- Product list
- Search and filter
- Add to cart
- Quantity update
- Cart total
- Checkout UI

Skills practiced:

- Components
- Filtering/sorting
- Cart logic

- Responsive design

3. Recipe Finder App

Features:

- Search recipes
- Filter by category
- Show ingredients and instructions
- Save favorite recipes

Skills practiced:

- API calls
- Dynamic routing or modals
- Cards and layouts
- Loading/error states

4. Chat UI

Features:

- Message bubbles
- Send messages
- Timestamps
- Typing indicator
- Responsive layout

Skills practiced:

- UI state
- Event handling
- Scroll behavior
- Clean frontend design

5. Dashboard UI

Features:

- Sidebar navigation
- Cards and charts

- Dark/light mode
- Responsive layout

Skills practiced:

- Layout design
- Reusable components
- Theme switching
- Data visualization

Best Project Path

A good learning order is:

1. Counter App
2. To-Do List
3. Form Validation
4. Weather App
5. Quiz App
6. Expense Tracker
7. Movie Search App
8. Kanban Board
9. E-Commerce App
10. Dashboard UI

For each project, build it first with **HTML, CSS, and vanilla JavaScript**. After that, rebuild the same project using **React** or another frontend framework.
